

Violence in Teen Dating

Title: Understanding the Buffering Effects of Protective Factors on the Relationship between Adverse Childhood Experiences and Teen Dating Violence Perpetration

Review: This article reviews the connection between adverse childhood experiences (ACES) and teen dating violence perpetration, as well as the protective factors that come into play. While there is a lot of current research on the effect of ACES on future health and wellbeing, the research is still limited regarding ACES and teen dating violence. This study measures family conflict and community violence, as well as several protective factors via a survey given out at middle and high schools.
